**KNEE ARTHRITIS**

**FALL 2015 DATA**

**1825 PROCEDURES**

**PATIENT DEMOGRAPHICS**

- **Female:** 792
- **Male:** 1034
- **Percentage of Patients Reporting >50% Improvement**
  - **44%**
  - **56%**

**What’s important here?**

The patient results detailed on this infographic are mostly **MEN**, who are **MIDDLE AGED** and only slightly **OVERWEIGHT** (BMI>25).

**AGE**

- **Years:** (13 - 92)
- **BMI:** (15.8 - 55.8)

**WEIGHT**

- **Lbs:** (100 - 350)

**HEIGHT**

- **Inches:** (49" - 79")

**PATIENT IMPROVEMENT**

**Percentage of Patients Reporting >50% Improvement**

The red graph represents the percentage of patients who reported >50% relief at various time points after the procedure. For example, at 36 months 70% of patients who responded reported more than 50% relief.

**Mean Improvement of All Patients**

The blue graph represents the mean reported relief at various time points after the procedure. For example, patients at 12 months may have reported anything from no relief, to 50% relief, to 90% relief the mean of all of those reports was 55% improved.

**About This Data**

This data analysis is part of the fall 2015 data download of patients who were tracked in the Regenexx advanced registry.

**Caution!**

This is registry data, which is not the same as a controlled trial. This means it was collected as patients were treated.

The Regenexx® Procedures are the nation’s most advanced non-surgical stem cell and blood platelet treatments for common injuries and degenerative joint conditions, such as osteoarthritis and avascular necrosis.

These stem cell procedures utilize a patient’s own stem cells or blood platelets to help heal damaged tissues, tendons, ligaments, cartilage, spinal disc, or bone.
